Waste to Energy

Organic waste is an energy resource. Animal waste products, kitchen waste, domestic and industrial food waste, used cooking oil, etc. are all perfectly suitable for utilisation in industrial biogas plants. Exploit your energy potential: WELTEC BIOPOWER offers you sustainable solutions in the field of industrial waste and disposal technology and ensures optimum integration with the other technologies in your process. Combined with smart heat utilisation concepts, you can benefit in two ways and perpetually enjoy maximum energy efficiency.

- Long plant life (stainless steel)
- Individual planning of your plant
- Processing of abattoir and food waste
- High yield – low maintenance costs
- Automatic unpacking, separation, and grinding
- Everything from one source

Process Reliability = Investment Security

The technical design of industrial biogas plants requires a high measure of experience, as all raw materials are subject to strict pasteurisation regulations. Another important factor, apart from smart and rugged technology, is the precise tuning of the employed components to each other, since process reliability and continuous efficient energy production depend on ongoing, uninterrupted waste supply.

For many years, WELTEC BIOPOWER has been doing pioneering work in this field around the globe. Thanks to its wealth of experience and matchless production depth, WELTEC BIOPOWER is your ideal partner. Industrial biogas plants from WELTEC BIOPOWER are profitable and future-proof and are internationally recognised as outstanding examples for efficient climate protection.

WELTEC Promise

LONG LIFE

WELTEC BIOPOWER is the only company that manufactures fermenters and equipment entirely from stainless steel, thereby guaranteeing an extremely long plant life.

EXPERIENCE

With more than 250 designed and installed biogas systems, WELTEC BIOPOWER boasts matchless competence and excellent expertise.

ONE-STOP PROVIDER

WELTEC BIOPOWER has the greatest, proven production depth and guarantees top-quality, premium plants – worldwide.
