

WB Control

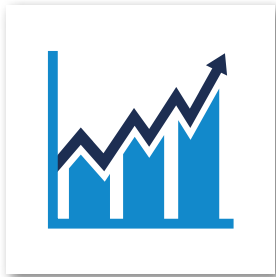

Control system for biogas plants

Organic energy worldwide

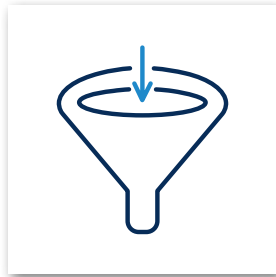

Simple, efficient, intuitive

- Wide range of business management evaluation options
- Easier feeding processes with FellowFeed and GuidoFill
- Short click paths, thus saving time in everyday work
- Energy planning and avoidance of peak loads thanks to filterable overviews of stirring intervals
- Web-based use on mobile devices, user administration with rights assignment and simultaneous access

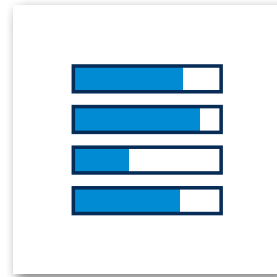

Analyses

- Trend analyses
- Diagrams for individually defined values
- Exportable and usable for error analyses

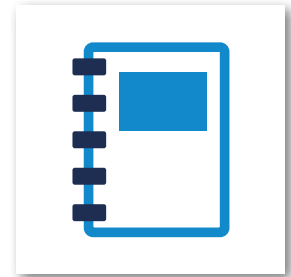

GuidoFill

- Display of the quantities of input materials still to be fed

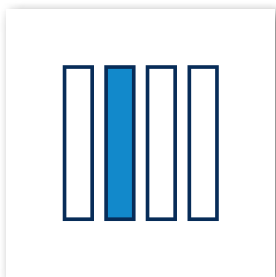

FellowFeed

- Automatically adjusts the feeding quantities depending on the amount of gas

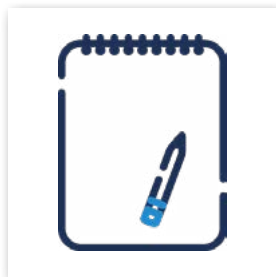

Archiving

- Permanent archiving of all system values

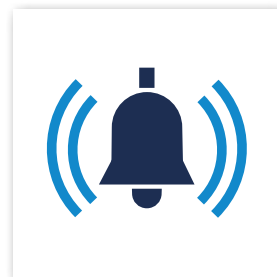

Stirring intervals

- Graphic overview of the agitators for optimum energy planning
- Avoidance of peak loads

Joblist

- Schedule pumping and feeding processes
- Filter function for well-structured overview

Alerting

- Customized alarm messages
- Messages sent according to priority
- Escalation capability

Reports

- Daily, monthly or annual overviews of production routes and energy production
- Values can be set individually
- Exportable for authorities, banks and experts
